Total Human Antithrombin III Antigen Assay

This human Antithrombin III antigen assay is intended for the quantitative determination of total Antithrombin III antigen in human plasma.

Antithrombin III is a glycosylated plasma serine protease inhibitor that forms a stoichiometric complex with coagulation cascade enzymes [1]. Antithrombin III inhibits alpha-Thrombin as well as Factor Xa, IXa, Xla and XIIa with heparin enhanced kinetics [2]. Type 1 Antithrombin deficiency is characterized by decreased plasma antigen levels of Antithrombin III [3].

Human Antithrombin III will bind to the capture antibody coated on the microtiter plate. After appropriate washing steps, peroxidase labeled polyclonal anti-human Antithrombin III primary antibody binds to the captured protein. Excess antibody is washed away and TMB substrate is used for color development at 450nm. A standard calibration curve is prepared using dilutions of purified Antithrombin III and is measured along with the test samples. Color development is proportional to the concentration of Antithrombin III in the samples.

REAGENTS PROVIDED
♦ Antibody Coated Plate:
1-96 well immulon strip plate (8x12 removable strips) coated with anti-human Antithrombin III capture antibody, blocked, and dried
♦ 10X Wash Buffer:
1 bottle of 50ml; bring to 1X using DI water
♦ Human Antithrombin III standard:
1 vial of lyophilized standard
♦ Anti-human Antithrombin III primary antibody:
1 vial of lyophilized horseradish peroxidase labeled polyclonal antibody
♦ TMB substrate solution:
1 bottle of 10ml solution

STORAGE AND STABILITY
All kit components must be stored at 4°C. Store unopened plate and any unused microtiter strips in the pouch with desiccant. Reconstituted standards and primary may be stored at -70°C for later use. DO NOT freeze/thaw the standards and primary antibody more than once. All other unused kit components must be stored at 4°C. Kit should be used no later than the expiration date.

REAGENTS AND EQUIPMENT REQUIRED
• 1-channel pipettes covering 0-10µl and 200-1000µl
• 12-channel pipette covering 30-300µl
• Paper towels or kimwipes
• 50ml tubes, 1.5ml centrifuge tubes
• 1N H₂SO₄
• DI water
• Magnetic stirrer and stir-bars
• Plastic containers with lids
• Microtiter plate spectrophotometer operable at 450nm
• Microtiter plate shaker with uniform horizontally circular movement up to 300rpm. (OPTIONAL)

**WARNINGS**

**Warning** – Avoid skin and eye contact when using TMB One substrate solution since it may be irritating to eyes, skin, and respiratory system. Wear safety goggles and gloves.

**DO NOT** mix any reagents or components of this kit with any reagents or components of any other kit. This kit is designed to work properly as provided.

**DO NOT** pipette reagents by mouth.

• Always pour substrate out of the bottle into a clean test tube. **DO NOT** pipette out of the bottle as you could contaminate the substrate.

• Keep plate covered except when adding reagents, washing, or reading.

**DO NOT** smoke, drink, or eat in areas where specimens or reagents are being handled.

**PREPARATION OF REAGENTS**

• **TBS buffer:** 0.1M Tris 0.15M NaCl pH 7.4
• **Blocking buffer:** 3% BSA in TBS buffer
• **Wash buffer concentrate:** The wash buffer supplied in a 10X concentrate and must be diluted 1:10 with deionized water for use with the kit.

**SPECIMEN COLLECTION**

The assay measures total human Antithrombin III in the 0.01-10 ng/ml range. Samples giving human Antithrombin III levels above 10ng/ml should be diluted in blocking buffer before use. A 1:50,000 to 1:100,000 dilution for plasma is suggested for best results.

**ASSAY PROCEDURE**

Perform assay at room temperature. Vigorously shake plate (300rpm) at each step of the assay.

**Preparation of Standard:**
Reconstitute standard as directed on the vial to give a 50ng/ml solution.

Dilution table for preparation of human Antithrombin III standards:

<table>
<thead>
<tr>
<th>Antithrombin III concentration (ng/ml)</th>
<th>Dilutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>800µl (Blocking buffer) + 200µl (50ng/ml)</td>
</tr>
<tr>

</tbody>
</table>

**NOTE:** DILUTIONS FOR THE STANDARD CURVE AND ZERO STANDARD MUST BE MADE AND APPLIED TO THE PLATE IMMEDIATELY.

**Standard and Unknown Addition:**
Remove microtiter plate from bag. Add 100µl standards in duplicate and unknowns to wells. Carefully record position of standards and unknowns. Shake plate at 300rpm for 30 minutes. Wash wells three times with 300µl wash buffer. Remove excess wash by gently tapping plate on paper towel or kimwipe.
**Primary Antibody Addition:**
Add 10ml of blocking buffer directly to the primary antibody vial and agitate gently to completely dissolve contents. Add 100μl to all wells. Shake plate at 300rpm for 30 minutes. Wash wells three times with 300μl wash buffer. Remove excess wash by gently tapping plate on paper towel or kimwipe.

**Substrate Incubation:**
Add 100μl of TMB substrate to all wells and shake plate for 5-10 minutes. Substrate will change from colorless to different strengths of blue. Quench reaction by adding 50μl of 1N H₂SO₄ stop solution to all wells when samples are visually in the same range as the standards. Add stop solution to wells in the same order as substrate upon which color will change from blue to yellow. Mix thoroughly and read final absorbance values at 450nm. For best results read plate immediately

**Measurement:**
Set the absorbance at 450nm in a microtiter plate spectrophotometer. Measure the absorbance in all wells at 450nm. Subtract zero point from all standards and unknowns to determine corrected absorbance (A₄₅₀).

**Assay Calibration:**
Plot A₄₅₀ against the amount of human Antithrombin III in the standards. Fit a straight line through the points using a linear fit procedure. The amount of total human Antithrombin III in the unknowns can be determined from this curve.

A typical standard curve.
(EXAMPLE ONLY, DO NOT USE)

**EXPECTED VALUES**

The concentration of Antithrombin III in normal human plasma by thrombin titration is 2.57 μM or 150 μg/ml [4]. An antigen concentration of 188 μg/ml in human reference plasma was determined by house testing at 1:100,000 dilution.
