

FITC Diluent

Cat. No. GTX03607

Application IHC-P, IHC-Fr

Package
100 ml

PRODUCT

Summary

In order to obtain optimal staining, correct dilution as well as selection of appropriate diluent is critical. Ionic strength, pH of the environment and the presence or absence of detergents can affect the binding as well as the stability of the primary antibody. The optimal pH together with stabilizing proteins in FITC Diluent ensures the maximum stability of primary antibodies. Our FITC Diluent contains optimal concentrations of sodium azide and detergents to prevent nonspecific binding and enable better penetration of primary antibodies. FITC Diluent is specifically designed for diluting primary antibodies for immunohistochemistry.

PROPERTIES

Form Liquid

Storage Store at 4°C.

Conjugation Unconjugated

Note
