DATA IMAGES

GTx10550 WB Image

Western blot using GeneTex's Affinity Purified anti-ZIC2 antibody shows detection of a band ~55 kDa (arrowhead) corresponding to ZIC2 in lysates from (lane 1) mouse brain and (lane 2) rat brain.

Approximately 20 ug of each lysate was run on a SDS-PAGE and transferred onto nitrocellulose followed by reaction with a 1:500 dilution of anti-ZIC2 antibody. Signal was detected using standard techniques. The upper band in the mouse brain lysate represents Zic2.
