

Human Matched Pair Tissue Array - Spleen Tumor

Cat. No. GTX21539

Application	IHC-P
Species	Human

Package
5 slide

PRODUCT

Summary

Formalin-fixed, paraffin-embedded tissue is useful for a variety of applications including the targeting of proteins, RNA, and DNA by means of Immunohistochemistry (IHC), in-situ hybridization (ISH) and fluorescence in-situ hybridization (FISH), respectively. Some tissue types may require extra attention as they may contain high levels of endogenous biotin, peroxidase, or autofluorescence.

GeneTex single tissue slides contain 4 μ m sections of formalin-fixed, paraffin-embedded human tissue (1-2 cm x 1-2 cm) affixed to Snowcoat X-tra (Surgipath) slides. Tissue diagnosis was performed by certified pathologists.

10 μ m sections are also available. Please inquire with sales@genetex.com.

Tissue type	Tissue pair
--------------------	-------------

APPLICATION

Application Note

*Optimal dilutions/concentrations should be determined by the researcher.

Suggested dilution	Recommended dilution
IHC-P	Assay dependent

Not tested in other applications.

PROPERTIES

Storage	Cool dry at room temperature. 4°C for long term storage.
----------------	--

Note

For laboratory research use only. Not for any clinical, therapeutic, or diagnostic use in humans or animals. Not for animal or human consumption.

Purchasers shall not, and agree not to enable third parties to, analyze, copy, reverse engineer or otherwise attempt to determine the structure or sequence of the product.
