

HL-60 (human promyeloblast; acute promyelocytic leukemia) cell line slides

Cat. No. GTX25532

Applications	ICC/IF	Package 5 slide
Species	Human	

phase of growth. The HL-60 cells were fixed in 4% paraformaldehyde and arrayed on a 12-well (5 mm) adhesive coated

PRODUCT HL-60 (promyeloblast; acute promyelocytic leukemia) Human HL-60 cells were cultured in Iscove's modified Dulbecco's medium with 4 mM L-glutamine and harvested at the log

slide, with each wellis surface specifically treated to enhance cellular attachment and to minimize background staining. Each well was loaded with approximately 7.5 x 103 HL-60 cells. A follow-up heat dehydration process was done to ensure the attachment of HL-60 cells and the stability of cellular proteins.

Tissue type Tumor

Applications

Summary

Application Note

HL-60 cell slide is provided for immunocytochemical analysis of protein and protein-protein interaction. Procedures for immunohistochemistry can be directly applied.

Properties		
Storage	Stable for up to 6 months at 4°C under desiccate conditions.	
Note	For laboratory research use only. Not for any clinical, therapeutic, or diagnostic use in humans or animals. Not for animal or human consumption.	
Note	Purchasers shall not, and agree not to enable third parties to, analyze, copy, reverse engineer or otherwise attempt to determine the structure or sequence of the product.
