

A-20 (mouse B lymphocyte; reticulum cell sarcoma) cell line slides

Cat. No. GTX25541

Application	ICC/IF
Species	Mouse

Package
5 slide

PRODUCT

A-20 (B lymphocyte; reticulum cell sarcoma)

Summary

Mouse A-20 cells were cultured in RPMI 1640 medium with 2 mM L-glutamine and harvested at the log phase of growth. The A-20 cells were fixed in 4% paraformaldehyde and arrayed on a 12-well (5 mm) adhesive coated slide, with each well's surface specifically treated to enhance cellular attachment and to minimize background staining. Each well was loaded with approximately 7.5×10^3 A-20 cells. A follow-up heat dehydration process was done to ensure the attachment of A-20 cells and the stability of cellular proteins.

Tissue type Tumor

APPLICATION

Application Note

A-20 cell slide is provided for immunocytochemical analysis of protein and protein-protein interaction. Procedures for immunohistochemistry can be directly applied.

PROPERTIES

Storage Stable for up to 6 months at 4°C under desiccated conditions.**Note**

For laboratory research use only. Not for any clinical, therapeutic, or diagnostic use in humans or animals. Not for animal or human consumption.

Purchasers shall not, and agree not to enable third parties to, analyze, copy, reverse engineer or otherwise attempt to determine the structure or sequence of the product.
