

# RAW 264.7 (mouse Abelson murine leukemia virus -induced tumor) cell line slides

**Cat. No. GTX25548**

<b>Application</b>	ICC/IF
<b>Species</b>	Mouse

**Package**  
5 slide

## PRODUCT

RAW 264.7 (Abelson murine leukemia virus-induced tumor)

### Summary

Mouse RAW 264.7 cells were cultured in DMEM with 4 mM L-glutamine medium and harvested at the log phase of growth. The RAW 264.7 cells were fixed in 4% paraformaldehyde and arrayed on a 12-well (5 mm) adhesive coated slide, with each well's surface specifically treated to enhance cellular attachment and to minimize background staining. Each well was loaded with approximately  $7.5 \times 10^3$  RAW 264.7 cells. A follow-up heat dehydration process was done to ensure the attachment of RAW 264.7 cells and the stability of cellular proteins.

## APPLICATION

### Application Note

RAW 264.7 cell slide is provided for immunocytochemical analysis of protein and protein-protein interaction. Procedures for immunohistochemistry can be directly applied.

## PROPERTIES

**Storage** Stable for up to 6 months at 4°C under desiccate conditions.

**Note** For laboratory research use only. Not for any clinical, therapeutic, or diagnostic use in humans or animals. Not for animal or human consumption.

Purchasers shall not, and agree not to enable third parties to, analyze, copy, reverse engineer or otherwise attempt to determine the structure or sequence of the product.
