Anti-AKT Antibody in western blot showing detection of endogenous protein in whole cell extracts from H₂O₂ treated MCF7 cells (lane 2). Recombinant AKT is detected in lane 3. Lanes 1 and 4 contain wcl from HeLa and A431 cells, respectively. Specific band staining is completely blocked when antibody is pre-incubated with the immunizing peptide (data not shown). The band at ~55-60 kDa, indicated by the arrowhead, corresponds to the expected molecular weight of AKT. AKT antibody was diluted 1:300 in 1% BLOTTO and reacted with the membrane overnight at 4° C. IRDYE800 conjugated Dnky-anti-Sheep IgG was used at a 1:10,000 dilution for 45 min at room temperature.
