C1q antibody [JL-1] (FITC)

Cat. No. GTX54404-06

Host	Mouse
Clonality	Monoclonal
Isotype	IgG2b
Applications	WB, ICC/IF, IHC-Fr, ELISA, Depletion
Reactivity	Human, Mouse, Rat

References (3)
Package
100 µg

Applications

Application Note

*Optimal dilutions/concentrations should be determined by the researcher.

Suggested dilution	Recommended dilution
WB	The typical starting working dilution is 1:50.
ICC/IF	The typical starting working dilution is 1:50.
IHC-Fr	The typical starting working dilution is 1:50.
ELISA	Assay dependent
Depletion	The typical starting working dilution is 1:50.

Note : Antibody JL-1 was used to stain tissue sections which were fixed in acetone.
Antibody JL-1 was administered to mice resulting in depletion of circulating C1q, glomerular deposition of C1q and induction of anti-C1q autoantibodies in susceptible mice.

Not tested in other applications.

Product Note

The monoclonal antibody JL-1 is reactive with the collagen-like region (CLR) only, which is the same region to which autoantibodies in mice and humans are binding. Anti-C1q autoantibodies deposit in glomeruli together with C1q but induce overt renal disease only in the context of glomerular immune complex disease. This provides an explanation why anti-C1q antibodies are especially pathogenic in patients with SLE.

Properties

Form	Liquid
Buffer	Filter-sterilized PBS, 1% BSA
Preservative	0.02% sodium azide
Storage	Store as concentrated solution. Centrifuge briefly prior to opening vial. Store at 4ºC. Protect from light.
Concentration	0.1 mg/ml (Please refer to the vial label for the specific concentration.)
Immunogen	Purified mouse C1q
Purification	Protein G purified
