PRODUCT

Summary

Glypican-3 (GPC3) is a glycoprotein attached to the cell membrane. It has a predicted molecular weight of 66 kDa. GPC3 overexpression is found in human hepatocellular carcinoma (HCC), but not in healthy adult liver. Studies have shown GPC3 to be a reliable serological and immunohistochemical marker for HCC diagnosis, and a potential target for immunotherapies.

Unboiled various whole cell extracts (30 µg) were separated by 7.5% SDS-PAGE, and the membrane was blotted with Glypican-3 antibody [GT2473] (GTX633410) diluted at 1:2000. The HRP-conjugated anti-mouse IgG antibody (GTX213111-01) was used to detect the primary antibody. Corresponding RNA expression data for the same cell lines are based on Human Protein Atlas program.
