PRODUCT

Summary

Iba1 antibody detects Iba1, a protein widely used by neuroscientists as a microglial marker and to gauge microglial activation. It is also expressed in macrophages. Discrimination between these two cell populations can be achieved via double staining with TMEM119 antibody (GTX134087), another useful microglia-specific marker, by identifying brain-residing microglia as Iba1+/TMEM119+ while CNS-infiltrating macrophages are Iba1+/TMEM119-.

Various whole cell extracts (30 μ g) were separated by 15% SDS-PAGE, and the membranes were blotted with Iba1 antibody [HL22] (GTx635363) diluted at 1:1000 and competitor's antibody diluted at 1:1000. The HRP-conjugated anti-rabbit IgG antibody (GTx213110-01) was used to detect the primary antibody, and the signal was developed with Trident ECL plus-Enhanced.
