PRODUCT

Summary SARM1 antibody detects NAD(+) hydrolase SARM1, a key factor with a predicted molecular weight of ~79 kDa. SARM1 acts downstream of neuroinflammatory and necroptotic signaling to induce axon degeneration. SARM1 inhibition is being actively studied to prevent axonal degeneration associated with neurodegenerative disorders.

Mouse tissue extract (50 µg) was separated by 7.5% SDS-PAGE, and the membranes were blotted with SARM1 antibody [HL1066] (GTX636097) diluted at 1:1000 and competitor's antibody (#Highly cited antibody) diluted at 1:500. The HRP-conjugated anti-rabbit IgG antibody (GTX213110-01) was used to detect the primary antibody.
