PRODUCT

Summary

Rad50 antibody detects RAD50, a ~154 kDa protein that, together with MRE11 and NBS1, forms the MRN complex that is intimately involved in DNA damage signaling, DNA double-strand break (DSB) repair, recombination, and replication. The complex is also involved other facets of genomic homeostasis including telomere maintenance. MRN plays a pivotal role in the DNA damage response (DDR) through interactions with ATM and ATR.

Non-transfected (–) and transfected (+) HeLa whole cell extracts (30 µg) were separated by 5% SDS-PAGE, and the membrane was blotted with Rad50 antibody [13B3] (GTx70228) diluted at 1:500. The HRP-conjugated anti-mouse IgG antibody (GTx213111-01) was used to detect the primary antibody.
